Subject: Eastern Michaud Flats Superfund Site - Simplot Plant Area Health and Safety Plan for Field Work to Support Remedial Design

Dear Ms. Meyer:

On behalf of the J.R. Simplot Company, please find attached three copies of the Health and Safety Plan for field work design to support remedial design at the Simplot Plant Area of the Eastern Michaud Flats Superfund Site. The plan is required by paragraph 11a of the Consent Decree.

There are two components anticipated for the upcoming field work; sampling of the Dewatering Pit and a well inspection, testing and installation program in support of groundwater extraction system design. Details of the Dewatering Pit sampling were recently provided to you in the form of a Sampling and Analysis Plan. The scope of the groundwater work was briefly discussed in the draft Groundwater Extraction Remedial Design Report and will be described in detail in a work plan that we expect to have out to you in about a week. We are hoping to perform the Dewatering Pit sampling around the second week of September and the groundwater work in early October, but will provide firm dates once scheduling issues are resolved.

Please do not hesitate to call if you have any questions or comments.

Respectfully,
MFG, INC.
